

# Wolves and Ranching

## Free Workshops for Livestock Producers in Colorado November 2021

The return of wolves on working lands is just one of the many expanding challenges ranchers may face in today's world. As such, there exists a greater need for understanding, tangible resources, and support for the stewards of Colorado's wild-working landscapes.

These workshops are designed to provide insight from first-hand experience, discuss practical solutions, explore opportunities for support, and to have open, respectful, and honest conversation around the topic of ranching with wolves and other predators.
